SKILLS

- **Languages:** Python • Java • JavaScript • HTML • CSS
- **Technologies:** API Design • React • Angular • Spring Boot • Github • Django • Testing • Documentation
- **Other:** PostgreSQL • GCP • Git / Version Control • Protocol Buffers • Improvisational Comedy Performer • SDLC

PROFESSIONAL EXPERIENCE

AbbVie | Developer Support Engineer | Los Angeles, California August 2024 - Now

ILIAD & Go/AI Team | Supporting & Educating Users and Developers of various LLMs (Large Language Models)

- Created learning materials and educational content that explains AI concepts in accessible, layman's terms, empowering new users to feel comfortable adopting Enterprise AI products.
- Built and grew an internal developer community by curating monthly events, fostering collaboration and driving engagement across teams.
- Onboarded new users onto generative AI platforms, providing hands-on guidance and setting up Claude Code environments to accelerate productivity.
- Developed prompt engineering strategies and templates enabling users to transform and reshape their data with ease using LLM-powered tools.
- Acted as the primary technical liaison between the EPIC team and other development teams at AbbVie, fostering collaboration and ensuring effective communications.
- Provided critical support to developers by explaining features, debugging applications interfacing with LLMs, and resolving support tickets related to unexpected REST API behavior.
- Developed, maintained, and communicated API documentation for tools developed by the EPIC team, enabling seamless integration for internal developers.

Google | Software Engineer | Chicago, Illinois September 2022 - May 2024

Google Searchmark | Search performance tools for capacity & latency *August 2023 - May 2024*

- Refactored Searchmark API using agile changes with Java protocol buffers (gRPC) Microservices to improve user results communication, enhancing client onboarding efficiency.
- Designed the code architecture, integrating OOP principles in Java to ensure easy testing and maintainability for critical performance tools.
- Supported Google infrastructure performance testing tool by lowering CPU usage for distributed systems.
- Deployed code over Google's internal and automated testing framework to enhance CPU usage.
- Designed unit tests based on interface and code functionality.

Google BigQuery | BigQuery DataFrames *September 2022 - August 2023*

- Wrote, expanded, refactored and tested BigQuery Python API as well as BQ Dataframes API, writing accommodating documentation. (BQ Python PR)
- Planned and authored a design document that outlined engineering solutions and architecture for a new feature for BQ Dataframes.
- Executed plans by writing and testing datetime method APIs using Pandas, Ibis, and PyArrow Python libraries for public release, supporting team unit functions.
- Contributed to Ibis open source to ensure cross-functionality between Ibis and Pandas libraries, a key tool for data handling. (DateTime Accessor)

- Designed automated testing and debugged to ensure compliance with quality and performance standards.

Guaranteed Rate | Appraisal Desk Team Lead | Chicago, Illinois May 2018 - September 2021

Appraisal Desk Team Lead

- Created daily dashboards for the department using Microsoft Excel by compiling and cleaning data from various sources.
- Monitored and processed appraisal orders, issues and escalations for various mortgage executives, underwriting teams, appraisers, and other clients.
- Provided cross-functional service support while managing an appraisal desk solely for three simultaneous companies.

EDUCATION

Multiverse Bootcamp 2024

- Learned the fundamentals of Software Development while contributing to Google's codebase.
- Software engineer and project manager for full stack projects utilizing Agile frameworks

Google Data Analytics Professional Certificate, *Coursera* 2022

- Learned the fundamentals of Data Analytics using R, Tableau

Bachelors of Science, *Georgia State University* 2014

OPEN SOURCE CONTRIBUTION

Ibis June 2023

- Open source Python library that enables users to make SQL with Python without knowing how to write SQL.
- Added microsecond method and tests for user precision. (Code Link)
