PROFESSIONAL SUMMARY

Engineer who teaches. Builds demos, hands-on labs, and curriculum for AI platforms and gets technical and non-technical audiences to use them. At AbbVie, was the organization's first Claude Code practitioner: ran bi-weekly **office hours** and 1:1 installs, delivered live demos across **5 global regions**, coached sales teams, and built the learning platform (**3,500 registered users**) that **cut related support requests 30%**. Builds with tool use, MCP, and LLM APIs across Amazon Bedrock, Google Vertex AI, and Microsoft Foundry. Prior: shipped public Python APIs at Google. Python, TypeScript, React, FastAPI.

CORE COMPETENCIES

Developer Education & Curriculum

Hands-On Labs & Live Demos

Office Hours & Technical Coaching

Tool Use, MCP & LLM APIs

Claude on Bedrock, Vertex AI & Foundry

Sales & Field Enablement

Measuring Content Adoption

WORK EXPERIENCE

AbbVie Aug 2024 - Present

Developer Support, Generative AI Applications

Los Angeles, CA

- As the organization's first Claude Code practitioner, built the enablement system around it: a Python Stop hook cost tracker deployed via an idempotent installer, an interactive React setup guide, a 75-slide training deck covering all 5 Claude Code extension points (CLAUDE.md, subagents, skills, MCP, hooks) with hands-on exercises, and a 1-hour compliance-forward training session with facilitator guide and handout.
- Ran recurring Claude Code **office hours** and scheduled 1:1 install support, and filed Jira tickets to the owning teams for friction that surfaced there, closing the loop between the field and the people who could fix it.
- Delivered live Claude Code demonstrations across 5 global regions** (Americas, Latin America, Germany, England, Japan) in 1:1 pairing and group sessions. One demo led to a CRISPR research application that **eliminated a \$75,000/year external consultant**: built the first draft, handed it off, and helped tune it as newer models shipped. Another, an Angular-to-React migration, was verified by the developer as **cutting 4 months of development time**.
- Coached sales teams on what AbbVie's AI offering made available and gave demos to sellers, scientists, and manufacturing audiences.
- Shipped a **16-page gamified Claude Code learning platform**: **3,500 registered users at a 28-minute average session** versus the 4-5 minute norm for documentation, 76% quiz completion, and a GxP compliance page that **reduced related support requests 30%**. Shipped **AI Workflow Magic** (Next.js, 60+ templates): **2,000+ users in three months, 87% quiz completion**, cutting prompt-writing time from 15+ minutes to under 2.
- Built with tool use and MCP: the **4D Orchestrator MCP Server** (TypeScript), two FastMCP servers around an Enterprise RAG pipeline (**40+ developer questions answered per week, zero compliance policy violations**), and support for teams adopting Figma's MCP server with Claude Code.
- Built **ILIAD Lite LiteLLM Model Explorer** (solo, full-stack) after the org's migration to LiteLLM across **Amazon Bedrock, Microsoft Azure, and Google Vertex AI**: **800+ internal users**, comparison time cut from 15-20 minutes to 45 seconds, LLM-as-judge grades validated at **92% accuracy against human expert scoring**.
- Facilitated **monthly technical sessions for ~300 engineers** across 7 internal developer communities; assisted Anthropic's team during an on-site Claude Code presentation at AbbVie, pairing it with follow-up support and documentation.
- Authored org-wide API integration guides, LLM troubleshooting playbooks, the "Should I?" decision framework, and Responsible AI and PII guidance with legal, security, and privacy teams.

Software Engineer

Chicago, IL

- Extended the **BigQuery Python API for public release**, implementing and testing datetime method APIs with Pandas, Ibis, and PyArrow, directly enabling external developer adoption at scale.
- Refactored Searchmark's internal API using **Java gRPC and Protocol Buffers**, reducing integration friction for new engineering teams onboarding to the service.

PROJECTS

EvalForge Lite

Open-source tool for choosing an AI model with evidence: compare up to 4 models side by side, including the same model on OpenRouter, Amazon Bedrock, Google Vertex AI, and Microsoft Foundry. LLM-judge and six-criteria scoring, latency, cost, and a "what matters most" selector; policy screening that fails closed; PDF/CSV reports. Ships as an MCP server (9 tools, uvx evalforge-lite) and a Claude Code plugin. 568 offline tests; built with Claude Code.

Python, Flask, MCP, AWS SigV4

EvalForge Lite Guide (write-up)

Published write-up on why to compare LLMs on your own prompts instead of a public leaderboard: how the tool works, the design decisions, and the prompts and metrics that matter.

Technical writing

MCP vs Plain API

Interactive lesson on when to use MCP tools versus plain API calls: four side-by-side scenarios (GitHub, Postgres, Filesystem, Slack), a trade-off table, and a judgment quiz.

HTML/JS

Understand AI from the Ground Up

Public learning guide: a seven-rung ladder from concepts to building, a multi-provider model rubric, prompt techniques, and build guides across 7 stacks, 6 of them Claude-specific. Designed and curated by me; built with Claude Code.

Interactive learning guide

EDUCATION

Software Engineering Bootcamp Multiverse

2022-2024

Apprenticeship-based full-stack engineering program; deployed production code to Google's codebase during the program.

B.A., Film & Video Georgia State University

2014

CERTIFICATIONS

AI Fluency: Framework & Foundations	Anthropic	2026
Claude Code in Action	Anthropic	2026
Claude with Amazon Bedrock	Anthropic (Claude Academy)	2026
Introduction to Model Context Protocol	Anthropic	2026
Model Context Protocol: Advanced Topics	Anthropic	2026

SKILLS

AI / LLM: Claude Code, MCP Server Development (TypeScript/Python), Tool Use, Agentic AI Systems, Anthropic API, Agent SDK, LiteLLM, RAG, LLM Evaluation, Prompt Engineering, Responsible AI

Languages & Frameworks: Python, TypeScript, JavaScript, Java, FastAPI, Flask, React 18, Next.js, REST, gRPC

Enablement: Technical Training, Developer Documentation, Curriculum Design, Live Demos, Office Hours, Discourse, Microsoft Power Platform
